Following this general refurbishment and extension by the architects Dietrich / Untertrifaller, the Festspielhaus Bregenz, built originally at the end of the seventies, radiates a new splendour and a thoroughly modern ambiance. With a new glass facade in place of the previous hermetic concrete walls, it is not just the redesigned entrance area but the entire building which is characterised by transparency and openness: flooded with sunlight during the day, and brightly lit at night. Comprehensive technical improvements in the fields of air-conditioning and ventilation, stage equipment, acoustics, lighting technology, and fire protection ensure brilliancy, comfort and energy efficiency. Today the Festspielhaus is numbered among the leading entertainment venues in the German-speaking countries.

### Festspielhaus, Bregenz

**Building:** Festspielhaus, Bregenz  

**Architects:** Architekturbüro Dietrich / Untertrifaller Bregenz  

**Proprietor:** Landeshauptstadt Bregenz  

**Consultant team:** 18 engineering consultancies  
**Project managed by:** Christian Freuts  

**Linear diffuser system:** INDUL linear diffuser  
**Types:** P15, P18, V45  

**Type of ceiling:** Plasterboard ceilings
Linear Diffuser INDUL

Festspielhaus, Bregenz

Function linear diffuser INDUL
The supply air is divided into fine individual jets which distribute the supply air into the room at an angle of 45° alternately to the left and to the right. The result is an especially uniform air distribution with an optimal diffuse ambient air flow, and no noticeable draughts.

System advantages
- Completely draught-free air distribution
- Low diffuser widths, from 15 mm
- Unobtrusive installation in ceiling joints
- Temperature differences up to -14 K
- Light, clean ceilings due to fine-jet characteristics
- Simple, quick and clean installation in all ceiling systems
- Special installation kit for plaster ceilings

The large auditorium in the Festspielhaus has been fitted with new seating, whose rows are arranged as in an amphitheatre, and acacia-wood panelling for a sublime atmosphere and an attractive appearance.

With seating for about 1800, the Festspielhaus Bregenz is one of the largest theatres in Europe. There were improvements too in the stage equipment and in the lighting and sound installations. Extended reverberation times have improved the acoustics.
